

Helio board :Power supply to HSMC

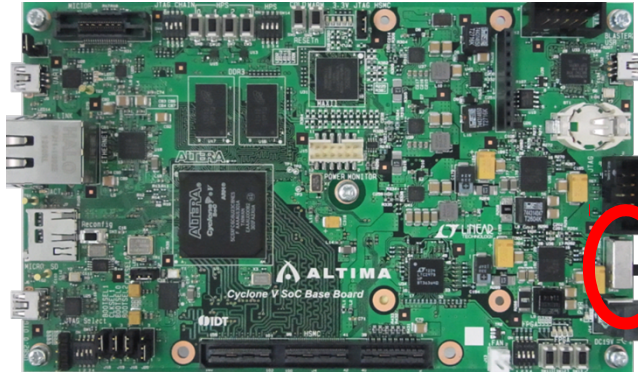

> Now(V1.1 and V1.2)

There is some possibility to cause device destruction on the Helio / daughter cards in the following situation.

- Customer connects AC adaptor Helio and electric point, but power switch position is “OFF”
- When customer connects daughter card to Helio’s HSMC, daughter card doesn’t connect securely
- In this situation, there is possibility that electric current flows between Helio and daughter card, and device on the board may become destroyed.

▶ Short term fix plan

Remove this switch
This means that Helio is powered on when customer will connect power cable to Helio.

▶ Long term fix plan
